

Capstone Project

Application Deployment

Step 1:

Pull the Code from Guvi Repo

Push the Source code to Github (DEV) Branch

```
210 mkdir project
211 cd project
212 git init
213 git config --global user.name "joe"
214 git config --global user.email "joebenhur.f@gmail.com"
215 git remote add upstream https://github.com/rvsp/reactjs-demo.git
216 git remote add origin https://github.com/joeben21/capstone.git
217 git remote -v
218 git pull upstream master
219 git branch dev
220 git checkout dev
221 git status
222 ls -al
223 git branch
224 git push origin dev
```

The screenshot shows the GitHub interface for the repository 'joeben21 / capstone'. The repository is public. The 'dev' branch is selected, showing it has 2 branches and 0 tags. A yellow banner indicates 'dev had recent pushes 1 minute ago' with a 'Compare & pull request' button. Below this, a status bar shows 'This branch is 4 commits ahead, 1 commit behind master.' and a 'Contribute' button. The file list shows the following files and their commit history:

File	Commit Message	Commit Hash	Date	Commits
public	Initialize project using Create React App	f1cd527	on Jul 13, 2020	4 commits
src	changes			3 years ago
.gitignore	Initialize project using Create React App			3 years ago
README.md	Initialize project using Create React App			3 years ago
package-lock.json	changes			3 years ago
package.json	changes			3 years ago

Step 2:

Create a Dockerignore ; Dockerfile; Dockercompose; Build.sh; Deploy.sh files and move it to Dev Branch in Github.

```
joe@Joe: ~/project
.git
.gitignore
/node_modules
~
```

```
joe@Joe: ~/project

FROM ubuntu AS builder

WORKDIR /app
COPY . .

RUN apt update -y
RUN apt install -y npm
RUN npm install
RUN npm run build

FROM nginx:alpine
WORKDIR /usr/share/nginx/html
RUN rm -rf /*
COPY --from=builder /app/build .
ENTRYPOINT ["nginx", "-g", "daemon off;"]

EXPOSE 80
~
```

```
joe@Joe: ~/project

version: '3'

services:
  app1:
    image: joeben21/dev:v1
    ports:
      - "80:80"
~
```

```
joe@Joe: ~/project
ls -al
docker rmi $(docker images -a -q)
docker build -t projectapp:v1 .
docker images
docker tag projectapp:v1 joeben21/dev:v1
echo $docker | docker login --username joeben21 --password-stdin
docker push joeben21/dev:v1

~
~
~
```

```
joe@Joe: ~/project
docker build -t projectapp:v1 .
docker images
docker tag projectapp:v1 joeben21/prod:v1
echo $docker | docker login --username joeben21 --password-stdin
docker push joeben21/prod:v1

scp -o StrictHostKeyChecking=no -i $Key docker-compose.yml ubuntu@13.233.172.93:/home/ubuntu/
ssh -o StrictHostKeyChecking=no -i $Key ubuntu@13.233.172.93 << EOF

echo $docker | docker login --username joeben21 --password-stdin
docker-compose up -d

~
~
~
~
~
```

```
227 history
228 vi .dockerignore
229 vi Dockerfile
230 vi docker-compose.yml
231 vi build.sh
232 vi .dockerignore
233 vi Dockerfile
234 vi docker-compose.yml
235 vi build.sh
236 vi deploy.sh
237 git push origin dev
238 ls -al
239 git branch
240 git add .
241 git commit -m "First commit"
242 git status
243 git push origin dev
244 history
```

Step 3:

Installation of Jenkins via EC2

```
ubuntu@ip-172-31-8-134:~$ history
 1  sudo apt update -y
 2  sudo apt install docker.io -y
 3  sudo usermod -aG docker jenkins
 4  sudo apt install openjdk-8-jdk
 5  curl -fsSL https://pkg.jenkins.io/debian-stable/jenkins.io-2023.key | sudo tee /usr/share/keyrings/jenkins-keyring.asc
 6  echo deb [signed-by=/usr/share/keyrings/jenkins-keyring.asc] https://pkg.jenkins.io/debian-stable binary/ | sudo tee /etc/apt/sources.list.d/jenkins.list
null
 7  sudo apt-get update
 8  sudo apt-get install fontconfig openjdk-11-jre
 9  sudo apt-get install jenkins
10  sudo systemctl start jenkins
11  sudo systemctl status jenkins
12  sudo apt install docker.io -y
13  sudo usermod -aG docker jenkins
14  sudo systemctl restart jenkins
15  exit
16  history
17  sudo systemctl status jenkins
18  docker images
19  sudo usermod -aG docker jenkins
20  exit
21  docker images
22  sudo apt install docker.io -y
23  sudo usermod -aG docker jenkins
24  docker images
25  sudo usermod -aG docker ubuntu
26  exit
```

i-0c8be71b991a05194 (Jenkins)

PublicIPs: 13.126.95.105 PrivateIPs: 172.31.8.134

Step 4:

Installation of plugins in Jenkins to support Docker functions

← → ↻ ⚠ Not secure 13.126.95.105:8080/manage/pluginManager/updates/		
Dashboard > Manage Jenkins > Plugin Manager		
Bootstrap 5 API	✓	Success
jQuery3 API	✓	Success
ECharts API	✓	Success
Checks API	✓	Success
JUnit	✓	Success
Matrix Project	✓	Success
Workspace Cleanup	✓	Success
Email Extension	✓	Success
Loading plugin extensions	✓	Success
Authentication Tokens API	✓	Success
Docker Commons	✓	Success
Docker API	✓	Success
Docker	✓	Success
Docker Commons	✓	Success
Docker Pipeline	✓	Success
Docker API	✓	Success
Javadoc	✓	Success
JSch dependency	✓	Success
Maven Integration	✓	Success
docker-build-step	✓	Success
Oracle Java SE Development Kit Installer	✓	Success
Command Agent Launcher	✓	Success
Docker Compose Build Step	✓	Success
Loading plugin extensions	✓	Success

Step 5:

Creating Deploy Server in EC2 with Key & installing docker to it

```

12 sudo apt update -y
13 sudo apt install docker.io -y
14 sudo usermod -aG docker ubuntu
15 exit
16 docker images
17 sudo apt install docker-compose
18 history
ubuntu@ip-172-31-35-217:~$ █

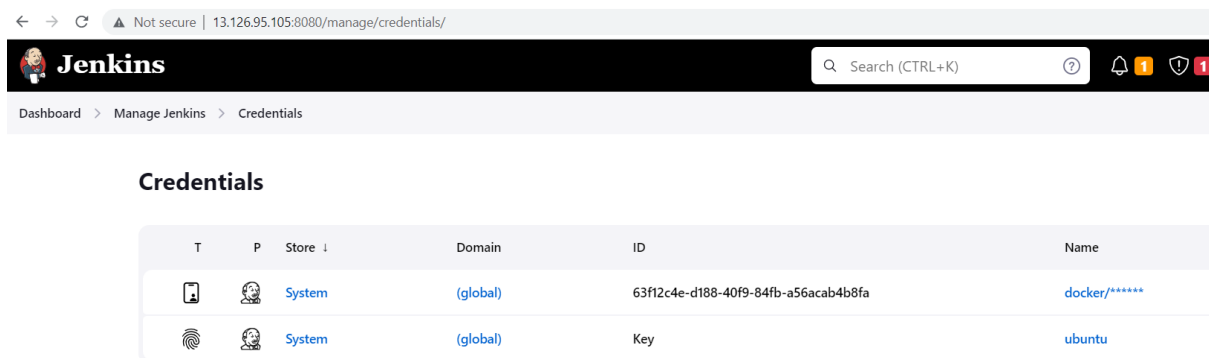

```

i-05d61da138d4318d1 (Deploy Server)

PublicIPs: 13.233.172.93 PrivateIPs: 172.31.35.217

Step 6:

Adding Docker Credentials & Deploy Server Key in Jenkins

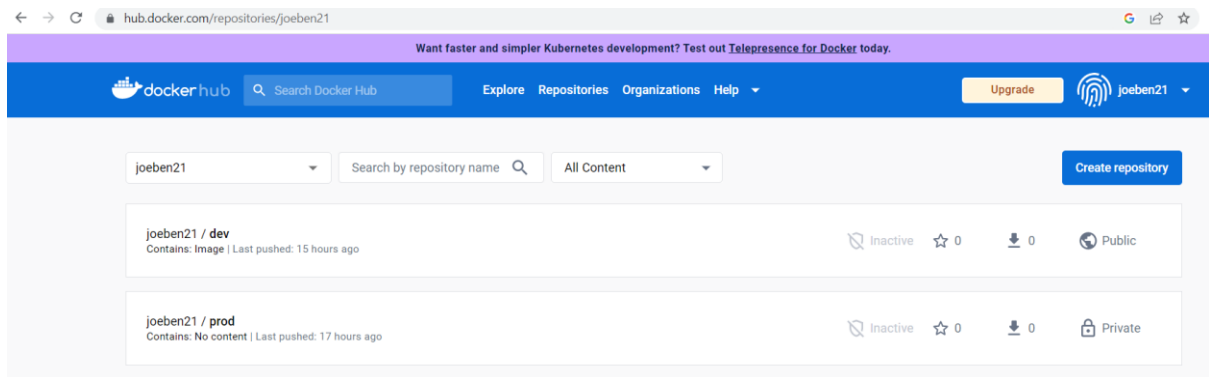

The screenshot shows the Jenkins web interface at the URL `13.126.95.105:8080/manage/credentials/`. The page title is "Credentials". Below the title is a table with two entries:

T	P	Store	Domain	ID	Name
		System	(global)	63f12c4e-d188-40f9-84fb-a56acab4b8fa	docker/*****
		System	(global)	Key	ubuntu

Step 7:

Create 2 repos – dev & prod

The screenshot shows the Docker Hub page for the user "joeben21". The page displays two repositories:

- joeben21 / dev**: Contains: image | Last pushed: 15 hours ago. Status: Inactive, 0 stars, 0 downloads, Public.
- joeben21 / prod**: Contains: No content | Last pushed: 17 hours ago. Status: Inactive, 0 stars, 0 downloads, Private.

Step 8:

Create 2 workspace – development (git pull); deployment (git merge)

Dashboard > deployment > #1 > Console Output

```
Login Succeeded
Creating network "ubuntu_default" with the default driver
Pulling app1 (joeben21/dev:v1)...
v1: Pulling from joeben21/dev
Digest: sha256:9538b02aced0678b7361123813e775db8eb744ba0b98bd1be5cdb9c712a83edd
Status: Downloaded newer image for joeben21/dev:v1
Creating ubuntu_app1_1 ...
Creating ubuntu_app1_1 ... done
+ ls -al
total 620
